Predictive properties
and therapeutical use
of gasotransmitters

A renal perspective

Anne-Roos Sophie Frenay

Anne-Roos S. Frenay
PhD-thesis

This project was financially supported by:
University Medical Center Groningen
Junior Scientific Masterclass, Faculty of Medicine, Groningen
Dutch Kidney Foundation
Research Institute GUIDE
Jan Kornelis de Cock Foundation

The printing of this thesis was kindly supported by:
University Medical Center Groningen
Research Institute GUIDE

Financial support by the Dutch Kidney Foundation, the Dutch Heart Foundation, ChipSoft, ABN AMRO and Noord Negentig for the publication of this thesis is gratefully acknowledged.

Predictive properties and therapeutical use of gasotransmitters

A renal perspective

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. E. Sterken
en volgens besluit van het College voor Promoties.
De openbare verdediging zal plaatsvinden op
woensdag 2 september 2015 om 16.15 uur

door

Anne-Roos Sophie Frenay

geboren op 18 januari 1988

te Nijmegen

Promotor

Prof. dr. H. van Goor

Copromotores

Dr. A. Pasch

Dr. M.H. de Borst

Beoordelingscommissie

Prof. dr. C.A.J.M. Gaillard

Prof. dr. R. Wang

Prof. dr. S. Florquin

W.H. Westendorp

Contents

Chapter 1	9
Introduction	

Chapter 2	21
Hydrogen sulfide in renal physiology, disease and transplantation – the smell of renal protection	

Part one

Gasotransmitters as predictors of graft and patient survival
in renal transplant recipients

Chapter 3	57
Urinary sulfur metabolites sulfate and thiosulfate as beneficial determinants for graft and patient survival in renal transplant recipients – a 4-year follow-up	

Chapter 4	71
Serum free sulfhydryl status is associated with patient and graft survival in renal transplant recipients	

Chapter 5	87
Reduced urinary NOx, but not nitroso species, excretion is associated with increased mortality and graft failure in renal transplant recipients	

Chapter 6	113
High urinary homoarginine excretion is associated with low rates of all-cause mortality and graft failure in renal transplant recipients	

Chapter 7	133
Plasma ADMA associates with all-cause mortality in renal transplant recipients	

Part two

Gasotransmitters as therapeutical intervention in animal models

Chapter 8 153

Incomplete restoration of angiotensin II-induced renal extracellular matrix deposition and inflammation despite complete functional recovery in rats – depletion of H₂S enzymes under hypertensive conditions

Chapter 9 181

Sodium thiosulfate attenuates angiotensin II-induced hypertension, proteinuria and renal damage

Chapter 10 207

Exogenous administration of thiosulfate, a donor of hydrogen sulfide, attenuates angiotensin II-induced hypertensive heart disease in rats

Chapter 11 229

The cystathionine γ -lyase inhibitor DL-propargylglycine reduces blood pressure and renal injury but increases kidney weight in angiotensin II-infused rats

Chapter 12 255

Summary, discussion and future perspectives
Nederlandse samenvatting

Chapter 13 273
